JLTV EMD Website: http://contracting.tacom.army.mil/majorsys/jltv_emd/jltv_emd.htm

Company	General Metals Powder Company (dba GEMPCO, dba GMP Friction Products)
Description	We produce sintered copper and iron wet or dry friction products for transmissions, pto applications, braking applications, and specifically engineered products for high energy needs. We are the sole producer of electrolytic copper in North America, enabling us to produce a higher quality material, allowing us to eliminate secondary operations; therefore reducing cost. The markets we serve today include: agriculture, wind energy, aerospace, mining, material handling, military, off road, trucking, ATV and light vehicle high performance. Currently we supply the parking brake for the today's HMMWV's and working on a 'brake and rotor wear improvement analysis' program for the service brake.
Business Type	Women-Owned Small Business

Address	1195 Home Avenue Akron, Ohio, 44310
POC	John S. Murphy/Sales Manager
Phone	216.225.8741
Fax	330.630.4053
Email	jmurphy@gempco.com

Company	Saab Barracuda LLC
Description	Saab Barracuda LLC (SBLLC), located in Lillington, North Carolina, develops and produces signature management products for vehicular and static systems that defeat or mitigate the threat posed by multispectral sensors: visual, near IR, thermal and radar in order to improve survivability on the battlefield. It also produces heat mitigation appliques for vehicles that passively reduce the effects of solar loading and in turn, keep the vehicle and its components cooler in order to conserve energy and save fuel. SBLLC is a U.S. entity with a facility security clearance in order to work U.S. signature management programs with the U.S. Government and approved DoD contractors.
Business Type	Large, part of Saab Technologies, (U.S. entity of Saab)

Joint Light Tactical Vehicle (JLTV)
EMD Phase Interested Subcontractor List

Company	Rentar Environmental Solutions, Inc. / EMA
Description	The Rentar Diesel Fuel conditioner is a passive inline pre-combustable contact catalyst(UL approved) which has 27 patents. The technology allows the lowering of the fuel vapor density, changing the ratio of aliphatic to aromatics resulting in the creation and release of small quantities of hydrogen gas. The different metals reacting with the minute natural moisture content in the fuel creates an EMF charge which allows clustered fuel molecules to repel each other creating more surface area of the fuel molecules to be surrounded with oxygen and hydrogen at the point of combustion. These simultaneous reactions result in a more complete fuel burn increasing range and reducing opacity.
Business Type	Veteran-Owned Small Business
Website	http://Rentar.com/
Address	14233 West Eleven Mile Road Oak Park, Michigan 48237
POC	Gary Kucharski, Defense Sales

Company	313Aerospace LLC
Description	313Aerospace manufactures military relays over 50A (MIL-PRF-6106) and military solenoids (MIL-S-4040), primarily used in the ground/mobile power arena. 313Aerospace also does value added work. We are one of a few companies that manufacture these types of relays and solenoids, and we stand out in that we custom-design our parts to your specifications. Our goal is to provide parts for production vehicles, and we can also provide prototype parts. Our primary customer has been the DLA; including a number of TACOM parts. We are based on the ISO9001 model; we are MIL-STD-790 certified, have passed 1st article testing on several products, and have a part on the QPL. All our parts are made in the U.S.A. (GSA schedule does not apply.)

Company	Eck Industries, Inc
Description	Eck Industries is an aluminum casting supplier who has been providing aluminum castings to defense, aerospace and high performance vehicle markets for nearly 60 years. Eck specializes in high strength alloys that enable a 50% weight reduction over iron components such as cases, housings, hubs, steering knuckles, brake calipers, bumpers, and window frames. The ballistic properties are attractive too, so consider wheel-wells, floor pans, and hatches. Eck castings have been in production for over 30 years on the final drive cases for the M2 Bradley, transmission components for the M1 Abrams, and a number of components on high performance race cars.

Company	MILSPRAY Military technologies
Description	MILSPRAY offers our cutting edge Tough Coat™ Military Bed liners, which substantially enhances and extends the life cycle of military vehicles. This innovative and thoroughly tested coating provides the ultimate in durability and corrosion resistance. Tough Coat™ was recently tested and approved for use by the USMC CPAC Program. Tough Coat™ is a lightweight integrated coating system that was designed and developed for military use. The multi-layer composite coating has an integrated layer of CARC and provides the ultimate in enhanced corrosion protection, as well as dent and damage resistance. Tough Coat™ material is tinted to match current camouflage colors and receives a final layer of CARC to preserve the protective qualities of the vehicle's original CARC finish. MILSPRAY has conducted extensive testing and field trials in the development of Tough Coat™ to ensure its compatibility with the CARC system, including IR signature management.
